

St Studio

Solutions for SAP® data management

Winshuttle Studio is an Excel-compatible product that automates data collection, validation and movement for use with SAP, saving you significant time and money and increasing process efficiency.

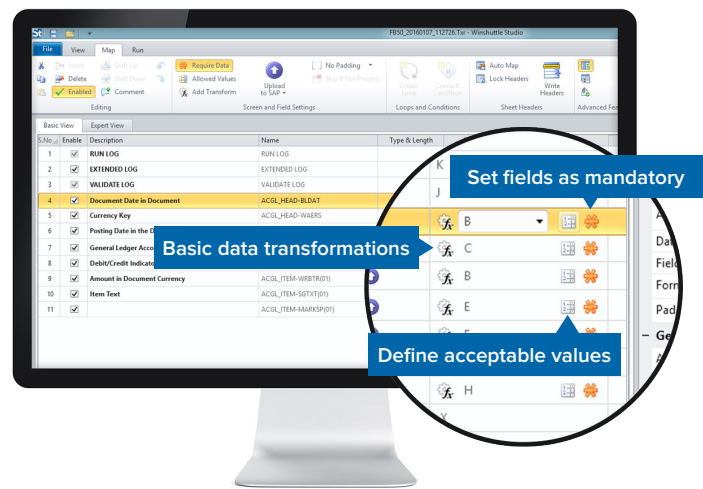

Studio enables business users to interact with SAP from familiar interfaces like Microsoft Office. By automating business processes, Studio allows you to become more efficient in SAP data management tasks, while improving SAP data integrity and accuracy.

Easy to use Excel compatible interface

Get up to speed more efficiently

Studio is one integrated tool for quickly deploying data integration templates for Excel, Access or web services to interact with SAP ERP. You can streamline SAP batch data management processes like mass record creation or change, and create complex scenarios with long text and document attachments.

You can create Transaction scripts using SAP BAPIs and queries from SAP tables, infosets and logical databases, without programming. Studio also supports round-trip data maintenance by enabling you to perform instant queries to extract SAP data before manipulating it in Excel and updating in SAP.

Additional data validation and verification features

Customer stories

Maersk achieved 90% time savings from automating transactions with 15% increase in productivity

Alstom was able to reduce the manual entry process from 6 days to half a day

Under Armour improved the performance of SAP Master Data loading and reduced manual data

Studio can help you:

- Eliminate manual data entry
- Upload/download SAP data in record time
- Improve data quality
- Minimize reliance on IT for Excel integration with SAP
- Get up and running with SAP - Excel integration faster
- Ensure compliance and security standards

“We’ve realized substantial savings from Winshuttle and with no application performance issues. And with Winshuttle’s simple interface, we’ve actually seen increased usage in SAP which means a higher ROI on our ERP investment.

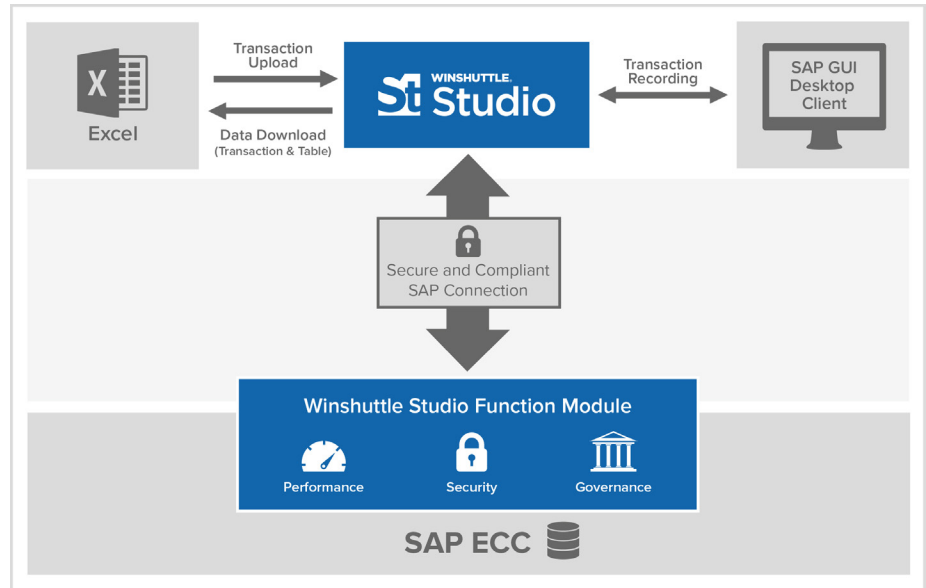

- SAP Architect, Maersk

The complete SAP application data management solution for Microsoft Office users

- SAP and Microsoft Certified
- SAP ERP data upload, change and download
- Installs on Microsoft Windows with Microsoft Office
- Native SAP Function Module

Winshuttle Studio architecture

Studio modules

Transaction

Automate data import into SAP

- Create transactions in 3 simple steps
- Have fully functioning scripts operational in minutes
- Validate data before posting to SAP
- Build complex chains for multi-step data maintenance tasks

Query

Simplify SAP extracts & reporting

- Ad-hoc reports from real-time SAP data
- Select one or more SAP tables, infosets or logical databases
- Define selection criteria
- Map data for Excel, Access, or text files
- Schedule queries

Direct

Use SAP BAPIs with no ABAP programming

- Leverage SAP APIs or remote enabled Function Modules
- Use BAPIs for data creation, extraction and updates in SAP

Runner

Run SAP processes easily & securely from Excel

- SAP data creation and change without interacting with SAP GUI
- Execute previously created query files from within Excel
- Minimize the impact of queries on the performance of the SAP system

Studio add-on

User Governance

Enable centralized visibility and control over scripts, queries, and user access

WINSHUTTLE®

Winshuttle software allows you to get control of your SAP ERP data through the use of lean applications that streamline data collection, validation and movement. Building upon your existing investments, Winshuttle's unique lean solutions delegate ownership and maintenance of data back to the business, increasing IT bandwidth and maximizing the velocity of SAP ERP data management and process automation.
